Canvas delivers content.

Delphinium delivers ENGAGEMENT!

PROSPECTUS PREPARED FOR

BYU Online High School

Delphinium transforms your existing Canvas courses into **engaging** student experiences, and an **early-warning** system for parents and teachers.

31%

FEWER FAILURES OVERALL

6,000 students • 72 classes

"We can confidently say that we're seeing better success with Delphinium — look at our data there and see that we improved significantly."

— Ryan Hansen, Digital Learning Director, Davis School District

Built on science
14 years of published behavioral research

Lightning fast setup
Transform your class instantly — just turn Delphinium on

Zero learning curve
Teachers keep using Canvas exactly as before

What BYU Online High School gets...

Delphinium Core INCLUDED IN EVERY PLAN
See every student's performance and act on it, seamless Canvas integration, and full support. p.5

Community Builder
Reach the right students at the right moment, without the manual email. p.6

Engagement Builder
Turn Canvas' gray wall of text into a class students actually want to engage with. p.7

YOUR INVESTMENT

$57,942 / year

Save $55,158 / yr

See total pricing on p.8

Pricing held until Oct 10, '26 | Go-live Target: Aug 1, '26

Prepared by **Jared Chapman**, Chief Innovation Officer, Delphinium, on Sep 24, '26.

This proposal is confidential and prepared exclusively for BYU Online High School. The pricing and terms within apply only to BYU Online High School and are not to be shared outside your organization.

THE CASE FOR ENGAGEMENT

Education moved online. Engagement didn't follow.

More education has moved online — and students and families expect that access now. But delivering content online is not the same as engaging students. In a classroom, teachers can read the room, catch a glance, stand by a student who is drifting, or capture focus with a quick activity. **None of that survives the move to a screen.** Engagement has been waiting for online tools to catch up.

> *"There's downsides to Canvas, if you ask kids, they don't like Canvas. It's basic, it needs something else to engage in the way we're looking for. Canvas itself falls way short."*
>
> — Ryan Hansen, Digital Learning Director

When engagement breaks down...

ATTENDANCE

1 in 4

students are chronically absent — still elevated years after the shift online.

RAND / Return to Learn Tracker, 2024-25

ACHIEVEMENT

1 in 3

students score below grade level across all core subjects—below pre-pandemic levels. The lowest performers keep losing ground.

The Nation's Report Card (NAEP), 2024

COST

$229K

— the cost of a K-12 education, and a student's lost potential, when they don't finish.

U.S. Census Bureau, FY2024

These aren't three separate crises. They share one common driver: **disengagement**. When students aren't engaged, the conditions for learning — and for finishing — quietly disappear.

Everything moved online except *the part that matters most.*

Your school has strong curriculum, capable teachers, and a platform to deliver it all. But **great teaching was never really about content** — it's about knowing when a student is winning and when they're slipping, and making sure they **feel seen** and **feel progress** along the way. The tools built for online learning were designed to deliver content, not *spark engagement*. That signal, that connection — **that's what's been missing.**

Canvas is data-rich, but insight-poor.

Canvas captures a LOT of information—Assignments, Gradebook, Syllabus, Modules, Analytics, etc. But it is scattered across pages built for storage, not engagement.

THE STUDENT SEES...	**a gray wall of text**. The signals they need—success, direction, progress—are buried. A slipping student can quietly fade, and nothing pulls them back.
THE PARENT WANTS...	**to be the cheerleader and coach** their kid needs, but Canvas gives opaque data without a story they can act on.
THE TEACHER FACES...	**hours of slow manual work** to find and reach at-risk students, one student at a time. Paid for in lost evenings.

What you need is the tools to turn that data into action: Delphinium.

DELPHINIUM TURNS DATA INTO ACTION

Canvas delivers *content*. Delphinium delivers engagement.

For an online student, **Canvas is the entire school experience.** Delphinium adds a quick layer over your existing Canvas courses — no rebuild, no new platform. It re-engages students, gives parents a clear picture, and hands teachers early warnings instead of spreadsheets.

Proof it works

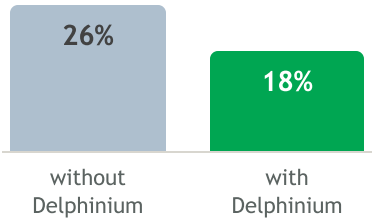

FEWER FAILURES

31%

Across **72 classes** and **6,000+ students**

Davis Connect case study · ’22 vs. ’23

COURSE FAILURE RATE

MOTIVATION

72%

of students say Delphinium is **more or much more motivating** than a traditional course

Delphinium is built on 14 years of published research. **The results are measured, not promised.** The results come from real schools, with real students. The courses didn't change. The teachers didn't change. Engagement did — and so did the outcomes. See the last page in this prospectus for research details.

In our research, when we ask students how a Delphinium course is different than a traditional course, one of the most common words we hear back is “**Fun.**” They also report doing their work earlier — and with higher quality. One student put it this way: “I was sitting on the couch watching Netflix and the thought popped into my head — I could be doing homework right now — and I did!” That is intrinsic motivation — not a reminder, not a deadline, but a student who wants to engage. That is what Delphinium was built to create — and the data proves it works.

Why it works — the research behind the design

SELF-REGULATED LEARNING

When students have the right information, they can set meaningful goals, monitor their progress, and reflect on what's working — **adapting and driving their own learning.**

In Delphinium →

- Students see their progress, performance, and priorities at a glance
- Progress updates create a feedback loop students use to adjust and improve
- A clear view of the whole journey helps students set goals and take ownership

---

BEHAVIORAL ECONOMICS

When next steps are clear, timely, and easy to act on, students are more likely to follow through and **build momentum toward success.**

In Delphinium →

- Clear visual cues make priorities and next steps easy to follow
- Timely nudges prompt action before students fall behind
- Celebrations and success signals reinforce momentum and persistence

---

SOCIAL PRESENCE

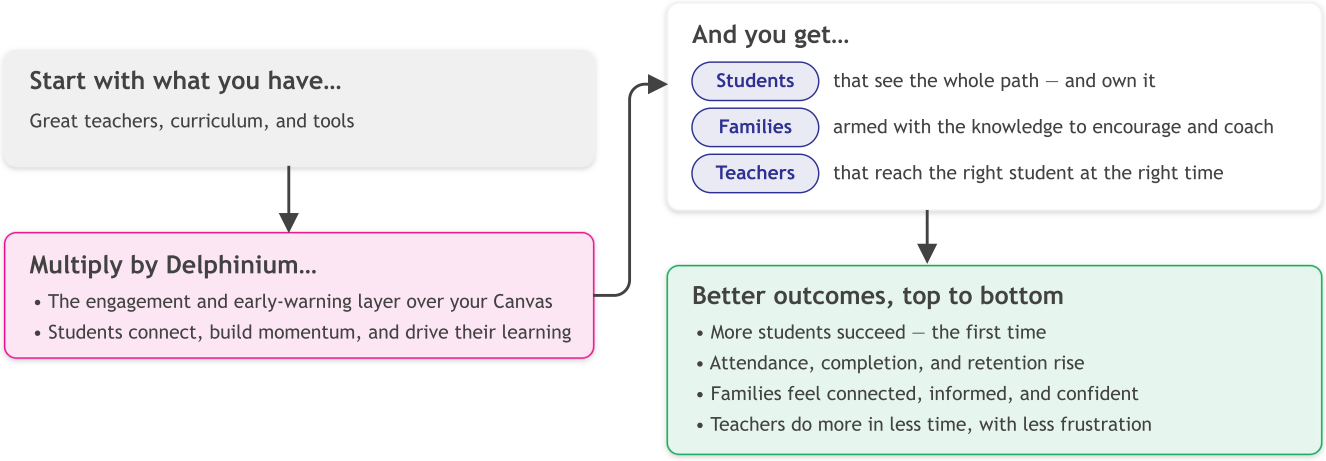

When students feel seen, connected, and supported, they are more likely to **engage, participate, and persist.**

In Delphinium →

- Personalized outreach helps students feel seen and valued

- Students can feel the class moving around them — and know they're not alone
- Teachers can reach the right student at the right moment — before silence turns into withdrawal

Your school already runs on Canvas — make it work harder for you

Results like a 31% drop in failures **means more** of the ~$229K invested in each student actually reaches the finish line — the same budget, working harder, every year. **Doing nothing is the most expensive option on the table.**

In their words...

> *"The enthusiasm generated by Delphinium has translated into increased engagement and work completion."*
>
> — Instructional Coach

> *"We have had students redo a quiz that they did poorly on to earn more points so they could just earn googly eyes for their avatar!"*
>
> — Online Teacher

> *"[Delphinium has] given me so much more opportunity to work one-on-one with my students. That's why I went into teaching!*
>
> *This has saved most of my Saturday nights!"*
>
> — Math Teacher

Over 125,000 Delphinium enrollments this year

Delphinium Core

Included in every plan

Control Tower • Seamless Canvas integration • Support

Turn Delphinium on and your existing courses become an engagement and early-warning powerhouse in minutes. Teachers are less overloaded and more effective, and earlier intervention reaches every at-risk student.

Control Tower

Know exactly where every student stands — and act on it without leaving the page.

- Every student's Canvas data in one view: engagement, progress, performance, and full message history
- Red / Yellow / Green flags surface at-risk students at a glance
- Class and assignment stats reveal trends, not just individual scores
- Act on what you see in one click — intervene on the spot
- Use Standard Delphinium communication tools to reach students and families right from the roster

> *"I can see — with color — my students' progress! See their points, their percentages — to tell me where a student is very quickly."*
>
> — High School Math Teacher

Seamless Canvas integration

No rebuild, no new tool to learn. Just turn Delphinium on and you're good to go instantly.

- One layer over Canvas, not a second platform to manage
- Runs on the Canvas courses you already have — no need to change your class in any way
- Edits in Canvas flow through automatically — never maintain two systems
- Works inside the Canvas student and parent apps, on any device

Support

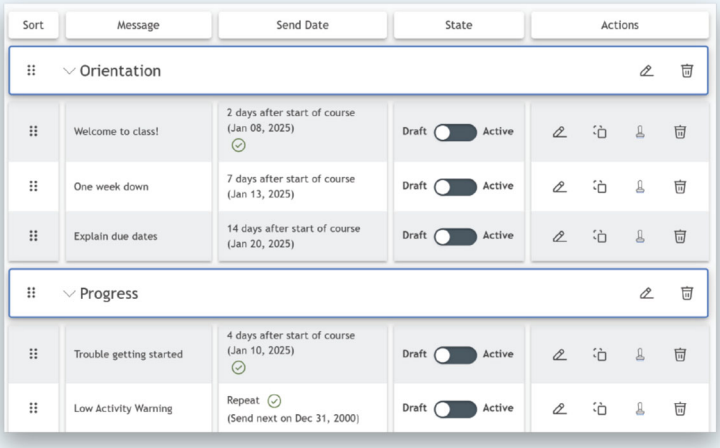

Help everywhere you need it, for students, parents, teachers, and admins.

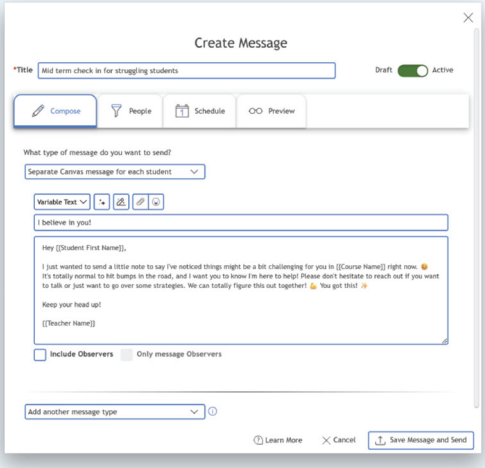

- Just-in-time help: instructions, tooltips, and links embedded right in the interface
- A dynamic, guided walkthrough tour
- An active community forum for peer answers and shared best practices
- Train-the-trainer model so your staff can scale support internally
- Ticket system for direct support from our team

Community Builder

Right message, right student • Communicate more, work less • Reach them everywhere

Reach every student the moment it matters - automatically - so a slipping grade never becomes a failed course. Teachers chase less, families know how to help, and every student feels seen.

Right message, right student

Stop blasting the whole class. Target exactly the students who need to hear from you — the moment they need you.

- Message one student, a targeted group, parents, or your whole class
- Filter by engagement, scores, status, or group — Find exactly the right students in seconds
- Reach at-risk students automatically with rules like "If points drop below 50, message them and CC the counselor"
- Celebrate students who are thriving, not just rescue those who aren't — and loop parents in on the good news!

> *"We can send targeted communication to specific groups of kids — and the data shows us exactly who those kids are."*
>
> **— Digital Learning Director**

> *"It saves me so much time in my communication and allows me more time to work with my students one-on-one."*
>
> **— Teacher**

Communicate more, work less

Stay ahead of every student, without staying late.

- Personalize at scale — Drop in live student data variables and every message auto-fills each student's real Canvas grades and progress, effortlessly
- Recurring progress reports and reminders send themselves, so students always know where they stand
- Schedule messages in advance — send dates recalculate automatically when a course copies to a new term
- Compose fast with templates — or let AI craft the message for you
- Build a message once and reuse it across every section and semester

Reach them everywhere

Send from one screen and land everywhere students actually look.

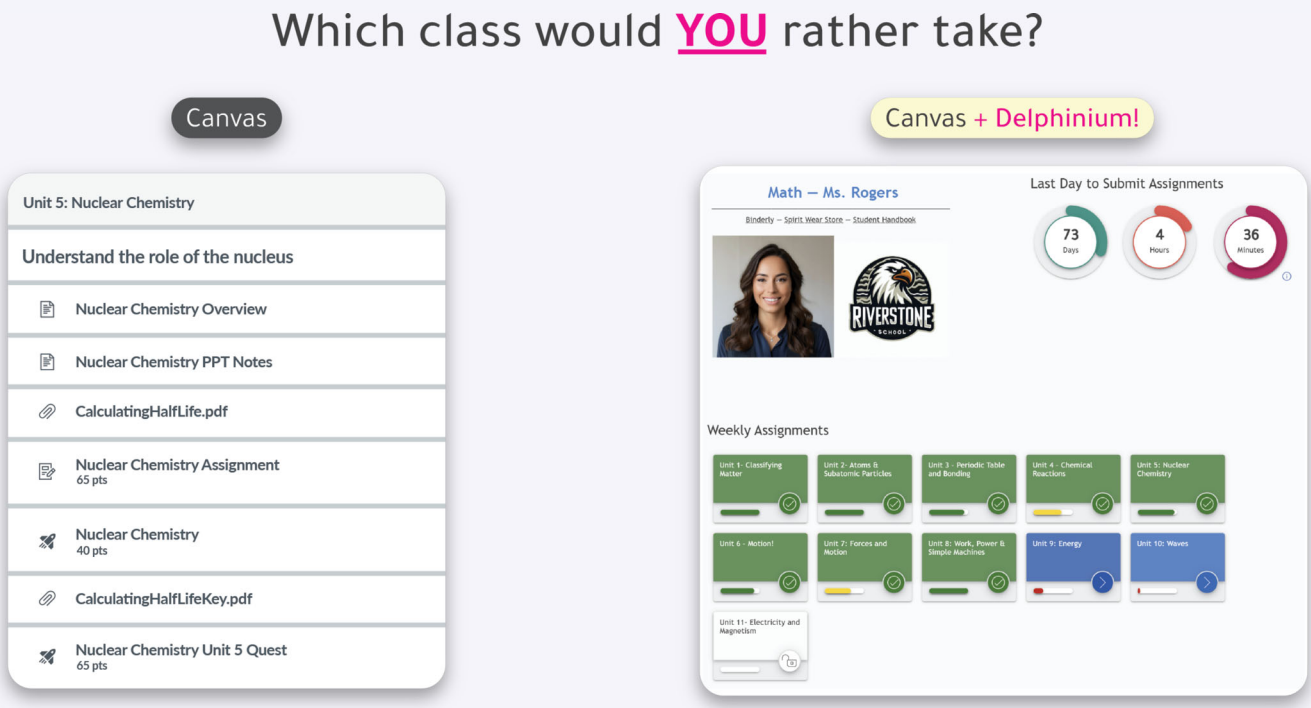

- One message can go out as a Canvas message, announcement, to-do item, banner, email, and text — so it never quietly fails to land
- Compose every kind of outreach from one screen, instead of hunting through scattered Canvas tools
- Keep one history of who was told what, and when — nothing lost across separate inboxes
- Messages auto-translate into 100 languages so every family hears from you in their own language

> *"You just saved me hours of mail merging! This saves teachers so much time and really brings that part of personalized learning that we all strive to reach for."*
>
> **— Curriculum Director**

Engagement Builder

Drive engagement • Build champions • Canvas makeover

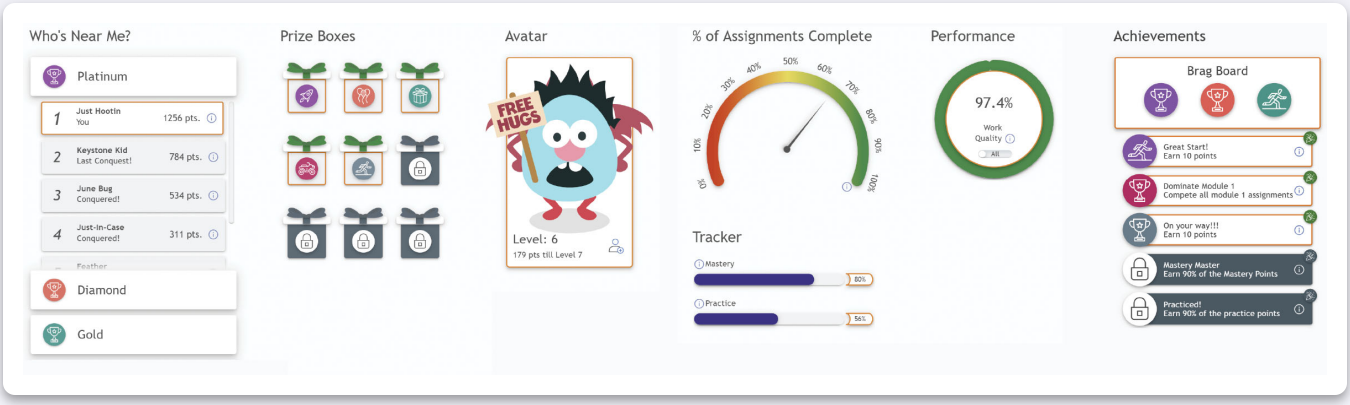

Turn your Canvas courses into an experience students want to engage with. Give every course one polished, on-brand look that's easy to navigate — and a shared view so parents and teachers can step in at the right moment.

Students who drive themselves

When students can see where they stand and where they're headed, they own their journey — and it shows: more pass the first time and fewer slip through unnoticed.

- Color-coded progress, quality, and performance are visible at a glance
- Students set, track, and own their goals
- Nudges drive engagement and reward momentum
- Success signals — celebrations, progress trackers, achievements, and game elements — turn every win into a reason to keep going

> *“Students have redone a quiz they did poorly on, just to earn more points for their avatar — engagement and work completion went up.”*
>
> **— Instructional Coach**

Give every student a champion

Surround every student with people who can actually help — at home and in class.

- Turn parents from frustrated bystanders into the support system every student needs
- Parents and teachers see the same live picture as the student — no guessing, and they can step in fast

A Canvas makeover for your whole school

Finally, a Canvas that looks as good as the teaching behind it — the same polished experience in every class.

- Transform Canvas' gray wall of text into a clean, engaging experience that's easy to navigate
- Design one consistent, on-brand look and feel — so every class feels like the same school

PRICING & VALUE

BYU Online High School's investment in engagement

Number of students	8,700	**Agreement term**	1 year

Products

Delphinium Core	Included
Community Builder License	$56,550
Engagement Builder License	$56,550
Annual Product Subtotal	**$113,100**

Discounts

Volume Discount (43%)	**-$48,720**
Multi-Product Discount (10%)	**-$6,438**
Annual Savings	**$55,158**

Add-ons

Implementation Fee (one time for setup and training)	$2,950

Annual Total	**$57,942**
Grand Total (1 Year)	**$60,892**

Pricing held until Oct 10, '26.

Product license includes:

- Unlimited access for every student, course, and teacher in BYU Online High School's Canvas account or subaccount
- Dedicated support for BYU Online High School's primary contact
- Ongoing train-the-trainer support for teachers
- Self-paced online lessons for every teacher
- A community support forum for all teachers, monitored by our team

Implementation is a one-time fee that includes:

- Installation
- One-on-one onboarding training for BYU Online High School's primary contact
- 3 to 5 Zoom trainings to onboard an initial cohort of teachers

Multi-year agreements:

- Discounts available: 2 years at 2.5% off, 3 years at 5% off, 4 years at 7.5% off, or 5 years at 10% off
- Lock in today's pricing for the length of the agreement
- Pay in advance of the license term, with payment plans available

ADMIN CONTROLS

Every teacher supported. Every class consistent.

From the admin panel, a school can set defaults and templates that carry into every course automatically. A new teacher doesn't start from a blank page, and every class reflects the same standard, without each teacher building it themselves. The result: a school that looks and feels like **one school**, not a hundred separate classrooms.

One class design, applied everywhere

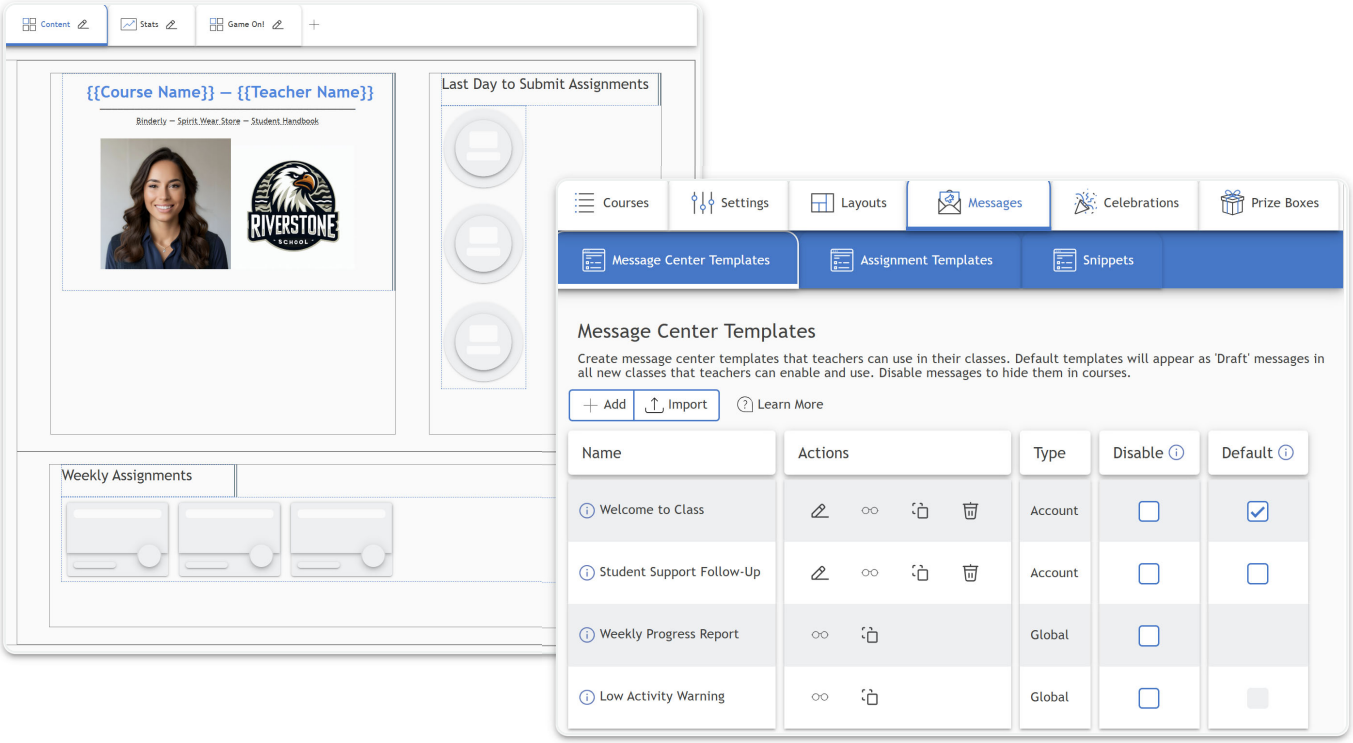

Create a school-wide layout and make it the default look and feel for all classes.

- Teachers can apply consistent layouts to their courses in just a few seconds automatically
- Celebrations and prize boxes can be created at the school level, for a shared experience from class to class
- Give teachers the option to customize their own classes
- Students get a consistent experience no matter whose class they're in

Messages, ready before teachers need them

Set up message templates once, and every course has access to them.

- Pre-built message templates available to teachers from day one
- Default message templates appear automatically in new courses
- The right message is already there for teachers, so communication stays consistent and on-brand

SECURITY & PRIVACY

FERPA-aligned, HECVAT-ready, independently tested

Delphinium is a Canvas LTI 1.3 plugin running on AWS, with student data encrypted in transit and at rest and stored entirely in the United States.

FERPA | HECVAT available | US-hosted on AWS | Canvas LTI 1.3 | WCAG 2.0 AA / Sec 508

Security

- Authenticated through Canvas via LTI 1.3 — no separate Delphinium logins or passwords to manage. Delphinium receives Canvas data over three channels, each independently controlled by your Canvas admin: the Canvas REST API (OAuth 2.0 tokens that expire hourly, renew automatically, and can be revoked from Canvas at any time), Canvas Data 2 (a JWT credential your admin issues and can revoke), and Live Events (a subscription your admin can disable, delivered to a Delphinium-managed AWS SQS queue inside our US account).
- Encrypted everywhere: AES-256 at rest plus S3 server-side encryption; HTTPS/TLS in transit; storage isolated from the public internet.
- Least-privilege access via AWS IAM with 2FA required; activity logged via CloudTrail.
- Regular external penetration testing and continuous monitoring via AWS Security Hub and Snyk.
- Cyber-liability insurance in place to cover the unlikely event of a breach.

Privacy & your data

- All storage and processing in the United States.
- Student data is never sold, and never used for advertising.
- Every data channel is scope-limited: the REST API is restricted to a fixed Canvas-enforced scope list, DAP is limited to a named set of Canvas Data 2 tables, and Live Events is limited to a named set of subscribed event types.
- You own your data. Export or deletion is available on request, with full deletion at the end of the contract.
- Data is retained only as long as needed to provide the service.

AI

- AI assists drafting only: It composes message text and images from teacher prompts — you review and send, nothing goes out on its own.
- System never sends student data to the AI service.
- AI runs on Amazon Bedrock under an AWS enterprise agreement — not a consumer AI account — and prompts are never used to train models.
- AI features are available to staff only — students have no access to them.
- AI features are optional.

Reliability & incident response

- Encrypted, point-in-time backups with a documented disaster-recovery plan.
- Documented incident-response process with prompt breach notification to affected districts.
- Serverless AWS architecture scales automatically and removes single points of failure.

Compliance Documentation

- Completed HECVAT
- Data scopes
- VPAT (accessibility)
- Privacy policy
- Penetration-test summary

View all compliance documents →

IMPLEMENTATION

Easy to enable

Delphinium is built to make adoption easy on everyone — including the people who support it. Setup is a one-time job, and teachers are up and running in minutes.

ACCOUNT SETUP	FIRST CLASS	EVERY CLASS AFTER
~20 min	**~3 min**	**~45 sec**
One-time, account-wide install — then every course is ready.	For a teacher to turn Delphinium on in their first course.	Copy the settings forward and the next course is done.

Setup — done once

Delphinium is already installed as an inherited app in your Canvas — enabling it account-wide takes about twenty minutes, once, and then you're finished.

1. Enable the Delphinium developer keys that are already inherited in your account
2. Install the Delphinium app using a simple client ID
3. Set up a dedicated Delphinium service role and permissions
4. Connect Delphinium to Canvas Data 2 and Canvas Live Events

That's it — every course is now ready for the moment a teacher decides to switch it on.

View install details here →

Teachers are ready in minutes

No changes to your courses, no new tool to learn. Courses can stay exactly as they are. Turn Delphinium on, answer a few quick questions, and it just works — fast!

- Teachers can set up their first class themselves in about three minutes
- Next classes are even easier — copy those settings and you're done in about 45 seconds
- Teachers use their Canvas course the way they always have, with no learning curve
- Every edit in Canvas passes through to Delphinium automatically and instantly

View enabling Delphinium details here →

One environment, one login

Delphinium lives inside the Canvas everyone is already familiar with, so there's no second system to run.

- **Built on LTI 1.3** — teachers and students launch Delphinium from inside Canvas, with no separate login or passwords to hand out
- **Access follows the Canvas roles and permissions** you already have — nothing new to provision
- **Built for real students** — heavy work runs on our servers, not student devices, so Delphinium stays fast on Chromebooks and weak Wi-Fi

SUPPORT

Easy to support

Support is always there when you need it, and when a question does come up, the answer is usually already on the screen.

Setup → Onboarding → Adoption → Training → Support

From hands-on onboarding to long-term support

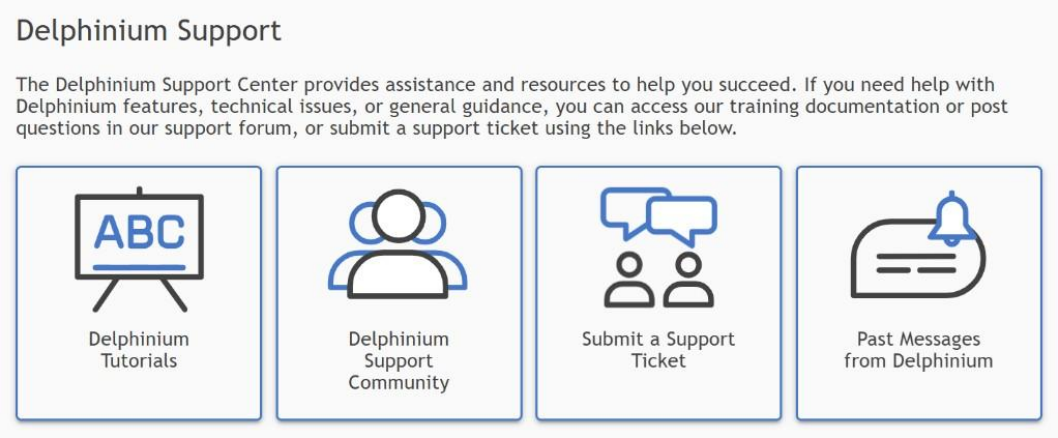

Onboarding is a partnership that starts before we go live and stays until your team is running on its own.

1. We guide you through install, configuration, and designing your layout until you know Delphinium inside out.
2. We provide hands-on training to your first champion cohort over Zoom in the early months until they're proficient.
3. Your champions spread adoption by bringing real expertise and peer reinforcement into professional development and staff meetings.
4. Together we bring everyone up to speed with train-the-trainer support, self-paced lessons, and a community forum.
5. We back your primary admin with a dedicated ticket support, so you always have the answers you need.

Support built right into Delphinium

The best support is the question that never has to be asked — so we put most answers one click away, right where teachers work.

- A guided walkthrough tour on every teacher's first load.
- “Learn More” links and tooltips beside every feature.
- Plain-language explanations embedded throughout the settings.
- Self-paced Getting Started and feature lessons for every teacher, at any time.
- Community support forum for teachers.
- Train the trainer for primary contacts.
- Ticket support for primary contacts.

OPTIONAL ADD-ONS

Add more reach to your Delphinium

SIS integration, in Delphinium

Reach every parent in Community Builder and Control Tower, not just the Canvas Observers.

- Connect your SIS to Delphinium to seamlessly pull in parent and guardian contact info, no separate signup required
- Available through OneRoster, Clever, or SIS API access
- Pricing subject to data connection fees and integration requirements

SMS texting that just works, in Delphinium

Requires SIS integration

Reach families by text they actually read, not emails they ignore.

- Real two-way conversation, not just a one-way alert
- No app to download — works on any phone, nothing new to install
- Every reply lands in Delphinium-enhanced Canvas — right where you are doing all the rest of your work

CREDITS	Prepaid message credits. One credit ≈ a typical short text; longer texts and MMS use more. Message replies use credits too.
ROLLOVER	Unused credits carry into your next SMS year when you renew. They remain available through the end of that renewal year, then expire. If school does not renew, unused credits are forfeited without refund at the end of agreement term.
OVERAGE	By default, messaging keeps running if you use more than your purchased block; extra usage is billed at your purchased rate. You can also choose a hard stop at 105% of your block until more credits are added. Your quote shows which option you've selected.

Control Tower Ultra (Coming soon)

Cross-course visibility • Every stakeholder • Research access

Your whole program in one view — the data leaders need to act, pulled from Canvas and made usable. The result: higher completion and pass rates across the program, stronger retention, and accountability numbers that hold up.

See your whole program from one tower

One vantage point over every course and every school at once — not one class at a time.

- Cross-course Control Tower: every student, every course, in a single view
- Everyone who supports a student — students, parents, teachers, teacher groups, and admins — together in one place
- The operations view for VPs of online academics, executive directors, and program leaders
- The data leaders need to act, pulled out of Canvas and made usable

> *“There’s a lot of data in Canvas. It’s getting it out in a usable way — that’s what we need.”*
>
> **— Ryan Hansen, Digital Learning Director, Davis School District**

A front door your school sets, not one browser at a time

Make the landing experience your own — the way students wish Canvas worked out of the box.

- Customize the home and dashboard layout, colors, and look across your courses
- A polished, consistent front door for every student — set by your school, not bolted on one browser at a time
- Surface what matters most up front, so students land on direction, not a wall of text

Go deeper than the dashboard

For when "what's happening" isn't enough and you need to know "why."

- Research access for deeper analysis across courses and cohorts
- Look for patterns across whole programs, not one class or one term at a time
- Build the evidence to show what's working — and where to invest next

RESEARCH FOUNDATION

14 years of research behind every design decision.

Long before Delphinium was a product, its founders were researchers — studying what actually drives students to engage, and publishing what they found. **Every engagement principle in the platform is grounded in peer-reviewed research** — built on decades of work by the field's leading scholars.

PEER-REVIEWED

14 yrs

of published research behind the platform
